(The art of Security)

Security is like salt.

Right amount added at the right time while  
cooking.

Food relished, life not relinquished.

# Updates

- For latest notes / insights on this topic kindly go to <https://banyanlogic.com/insights>
- Link to the latest assessment forms are available at this site as well

# Why is it important

- Three 'frictions' that fail us from serving the Enterprise / Agency / Business goals in a secure manner
- Absolute Friction
  - Occurs and snow balls when the Stakeholders are not heard or understood or when you are not heard or understood
- Relative Friction
  - Occurs and snow balls when there is Process disconnect
- Tactile Friction
  - Occurs and show balls when Stakeholder's technology is not understood sufficiently and deeply by Security or when security technology is not communicated sufficiently to Stakeholders
- Human Centric / Design Think
  - Too little friction cannot move, too much friction cannot move
  - Generally too much friction is what afflicts processes

# Stakeholders who influence Security

# Water Lifecycle

- Ice <> Water <> Vapor
- I get that

# Water Lifecycle

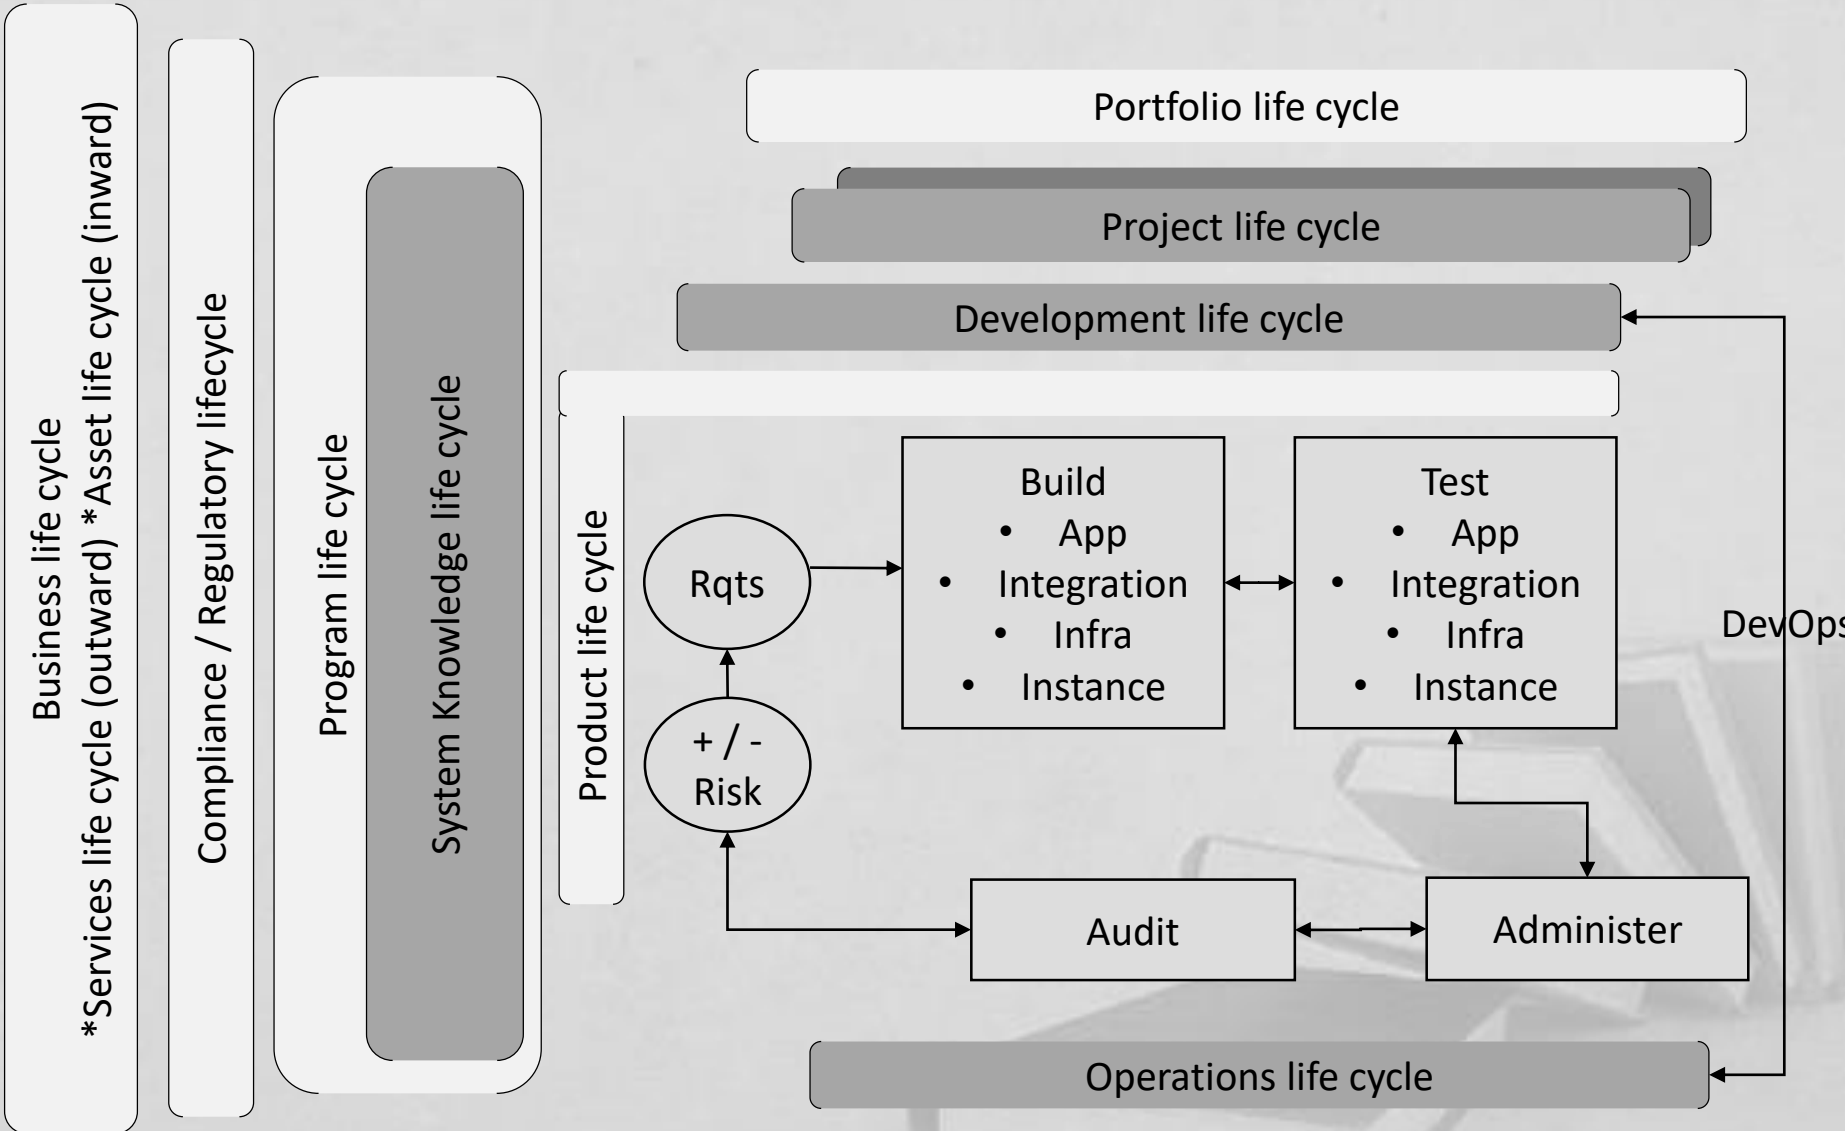

- Ice <> Water <> Vapor
- Ocean > Clouds > Rain or Snow
- Rain > River > Flows / Floods > Ocean > Vapor > Clouds > Rain
- Snow > Ice caps melt > River > Ocean > Vapor > Clouds > Snow
- Rain > River > Flows / Floods > Ocean > Vapor > Clouds > Mountains > Rain
- Snow > Ice caps melt > River > Ocean > Clouds > Mountains > Snow
- Rain > River > Flows / Floods > Ocean > Vapor > Clouds > Winds > Mountains > Rain
- Snow > Ice caps melt > River > Ocean > Clouds > Winds > Mountains > Snow
- Rain > River > Flows / Floods > Ocean > Seasons > Vapor > Clouds > Winds > Mountains > Rain
- Snow > Ice caps melt > River > Ocean > Seasons > Clouds > Winds > Mountains > Snow
- Rain > River > Dams > Flows / Floods > Ocean > Seasons > Vapor > Clouds > Winds > Mountains > Rain
- Snow > Ice caps melt > River > Dams > Ocean > Seasons > Clouds > Winds > Mountains > Snow
- **Hum!!**

# Water Lifecycle

- What's the point?
- Kindly note that the content here is work in progress
- The data points and inferences that I put together are of course simplistic
- The key words in the last slide are correct so use them until you arrive at your context specific key word

# Lifecycles Impacting Security

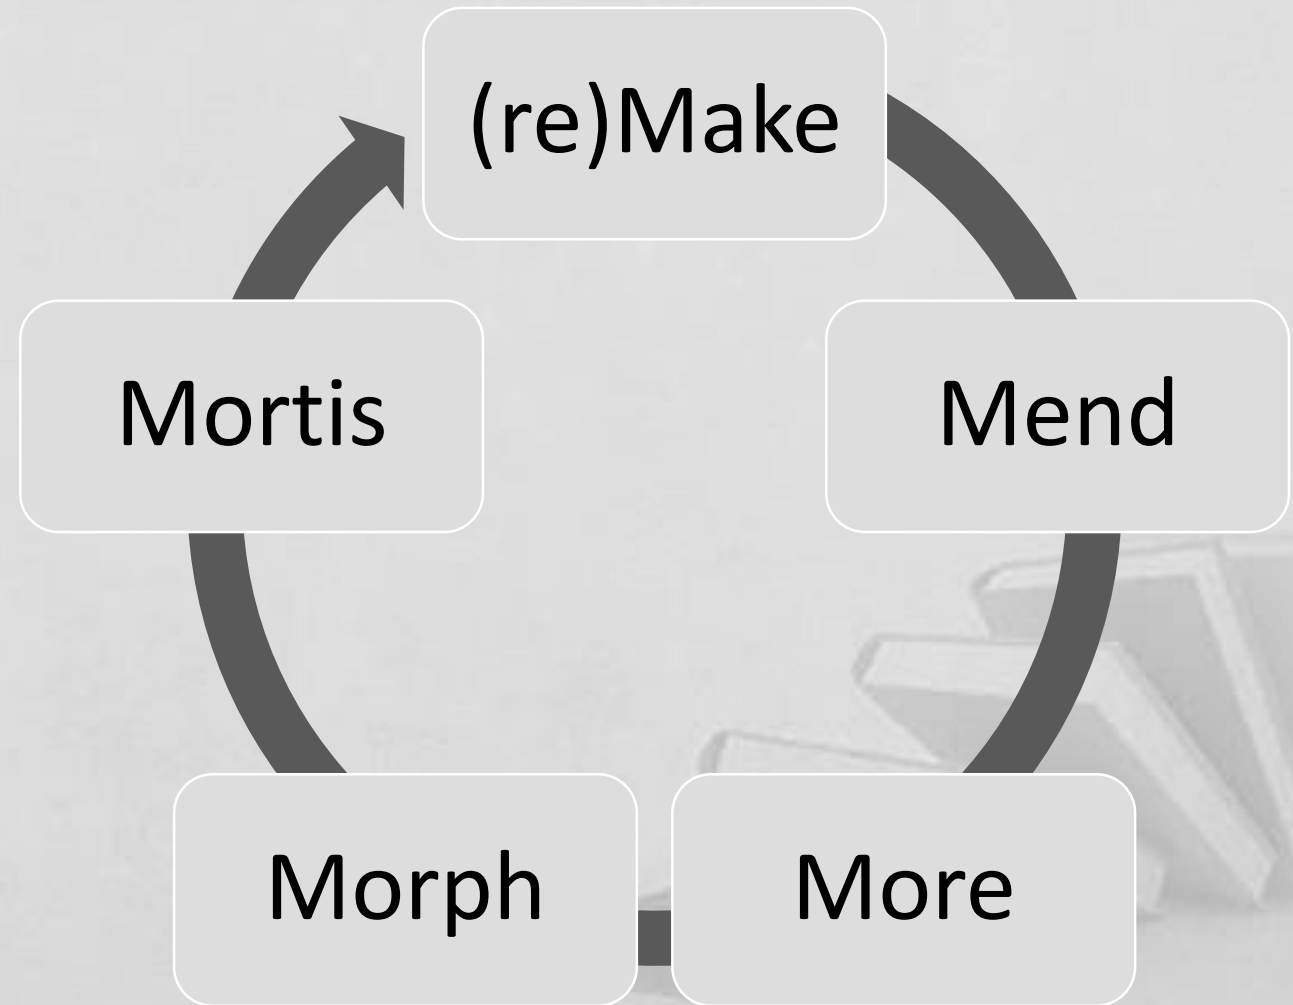

# Lifecycle changes with perspective

- Line of Business (LOB) portfolio look like projects with a common risk signatory to you (security)
- Your program looks like part of a project to people in the LOBs
- You don't have portfolios as far as LOBs are concerned
- LOB program is not IT LOA (Line of Automation – made it up) program
- Object / reuse libraries is a portfolio efficiency to LOA. It is part of a project for security.
